32% UAN (Liquid 32-0-0)

The paragraph reads well and is accurate.

Let me know if you have any other questions.

Cheryl Burdett

Cheryl: please take a look at the paragraph below and let me know if my edits are ok. Also, see the yellow highlight, looks like there might be a number missing. Thanks.

EPA obtained copies of documents regarding CSD's nutrient management practices during a June 2017 inspection of the CSD facility, and from the Wisconsin Department of Natural Resources (WDNR). CSD's SnapPlus Spreading and Nutrient Management Crop Report, sorted for Crop Year 2015, provides product name and analysis for fertilizers used on the crop fields. The SnapPlus report provided application rates, methods and total amount of fertilizers applied. Inorganic fertilizer sources used by CSD include ammonium sulfate, aspire, potash, Cal-Sul, 32% UAN (Liquid 32-0--), Corn Popper (different analysis), and Potato Starter. Organic sources include post digester solids and post digester liquids. However, the information does not include dates of application.
